

What type of assignment would you like to create?

**Written Assignment**
Students write, capture, submit photos/PDFs of answer sheets.

**PDF Annotation Assignment**
Students annotate given PDF online.

**Online MCQ Assignment**
Students take MCQs, get instant automated results.

**Multimedia Assignment**
Students upload multimedia assignments.

**Coding Assignment**
Student can type, copy paste their code.

Physics Assignment – Class IV

This assignment is designed to help students understand basic concepts of Physics such as force, energy, light, and sound. Through simple questions and activities, students will learn how these concepts are used in everyday life and develop curiosity about the world around them.

Physics Multimedia Assignment

This assignment helps students explore the basics of Physics in a fun and simple manner. It supports learning by encouraging students to think, observe, and apply concepts in real life.

1. Define "Center of mass" of the system.
Center of mass of the system is a particle whose mass is equal to the total mass of the system and is acted upon by total external force F_{ext}
2. Define a "rigid body".
A system in which the distance between any two particles remains constant is called a rigid body.
3. State law of conservation of linear momentum.
When no external forces act on a system of two colliding objects, the vector sum of their linear momentum remains constant and is unaffected.

classmate

1. Define "Center of mass" of the system

Center of mass of the system is a particle whose mass is equal to the total mass of the system and is acted upon by total external force F_{ext}

2. Define a "rigid body".

A system in which the distance between any two particles remains constant is called a rigid body

3. State law of conservation of linear momentum

When no external forces act on a system of two colliding objects, the vector sum of their linear momentum remains constant and is unaffected by their mutual interaction.
